(Installation of oversize replacement threaded insert)

(oversize threaded insert)

This over sized threaded insert is used to secure a tight grip for bed post. Larger teeth of replacement inserts will increase holding strength for the bed post.

Remove and discard original smaller threaded insert and replace with over size insert.

Use an Allen Wrench to insert self tapping harpoon thread into existing hole.

(Allen Wrench)

To install replacement threaded insert use an Allen Wrench to simply screw the new insert into existing hole. Insert the threaded stud end of the bed post into the new oversized insert until it stops. Tighten securely, but do not over tighten.

Tip: Bed posts are manufactured to support a canopy frame and for decorative appearance. Caution is advised not to over tighten bed post and to refrain from pulling or swinging on canopy or bed post.
